

Nyquest Archive Viewer

Seamless document archiving

Overview: What is NAV?

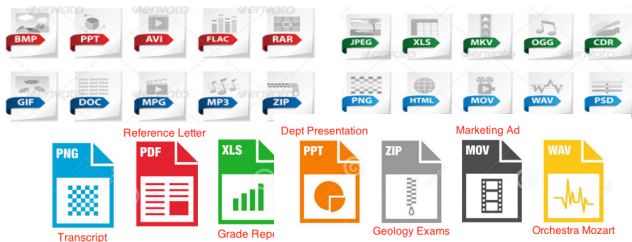

- The Nyquest Archive Viewer (NAV) is a web application that allows for the electronic archiving of documents and data.
- The application can run standalone or as an “add-on” to existing ERP systems.
- Reduces the need for having large paper archives and increases office productivity.

Easy to setup/learn/integrate

- When run, the application shows a tabular view of all associated documents and attributes within indexing “virtual folders”.
- “Look and feel” allows users to understand the application with minimum end-user training.
- Supports all major HTML5 compatible browsers on all major operating systems. No Java, ActiveX plugins required.
- Core technology is a REST Web Service that allows easy integration with other third-party components.

Universal File and Document Support

- Virtually all file formats (DOCX, XLSX, MP3, MP4, PDF) supported.
- Application also supports user defined tagging of documents.
- Hierarchical security allows different users to have different access rights to file formats and tagged documents.

Easy to setup with host ERP systems!

- NAV uses “Adaptive Indexing” to store indexing information *directly* against the host ERP data. **This means that once NAV is installed and configured, it is immediately ready for use!**
- No need for the constant running of “messy” conversion or data migration scripts.
- Seamless integration with the host ERP application.
- Support for ERP systems using all major database technologies (e.g. Oracle, PostgreSQL, MySQL, SQL Server)

Workflow Ready

- NAV Folders and associated documents can be routed through a user-defined sequence of users to simulate “real-world” business processes.
- Eliminates sending and emailing of documents from user to user in an office.
- Model of processes such as:
 - Admissions processing
 - Financial Aid Awards
 - New Employee Hires

OCR Ready

- NAV utilizes Google Tesseract OCR technology.
- Documents added can have OCR metadata extracted and saved for later content searches. (E.g. Find all documents containing the phrase “Shanghai or 上海 2015”)
- Supports OCR in English, Japanese, Chinese and Norwegian
